Dynamics CRM Deployment Options

Microsoft Dynamics CRM with the **KMS Project-CRM** solution can be deployed within your business in a number of ways, each of which will fit into your current and future IT infrastructure requirements.

No matter which option you take you can still access all of your CRM information via Outlook, Browser or portable devices.

On Premises   **Online**

Best experience across devices   Cloud on your terms

If your business changes so too can your deployment. Microsoft Dynamics CRM with the KMS Project-CRM solution can easily be migrated from an on-premise deployment to an online solution or vice versa using standard migration tools. KMS will work with you to determine the best deployment route for your business.

What are the options?

Microsoft Dynamics CRM is an industry leader trusted by countless companies who recognize the importance of building and maintaining strong relationships with customers.

Before comparing the key-elements of Dynamics CRM online and Dynamics CRM On-Premise, it is on the positive end to have a quick short description on them.
Microsoft Dynamics CRM is available in two primary delivery mechanisms: Dynamics CRM On-Premise and Dynamics CRM Online.

The on-premise version of CRM is hosted by the customer in an on-premise server. With CRM Online, Microsoft takes over the hosting responsibilities. For the average end-user, there is no substantial difference between CRM Online and On-Premise.
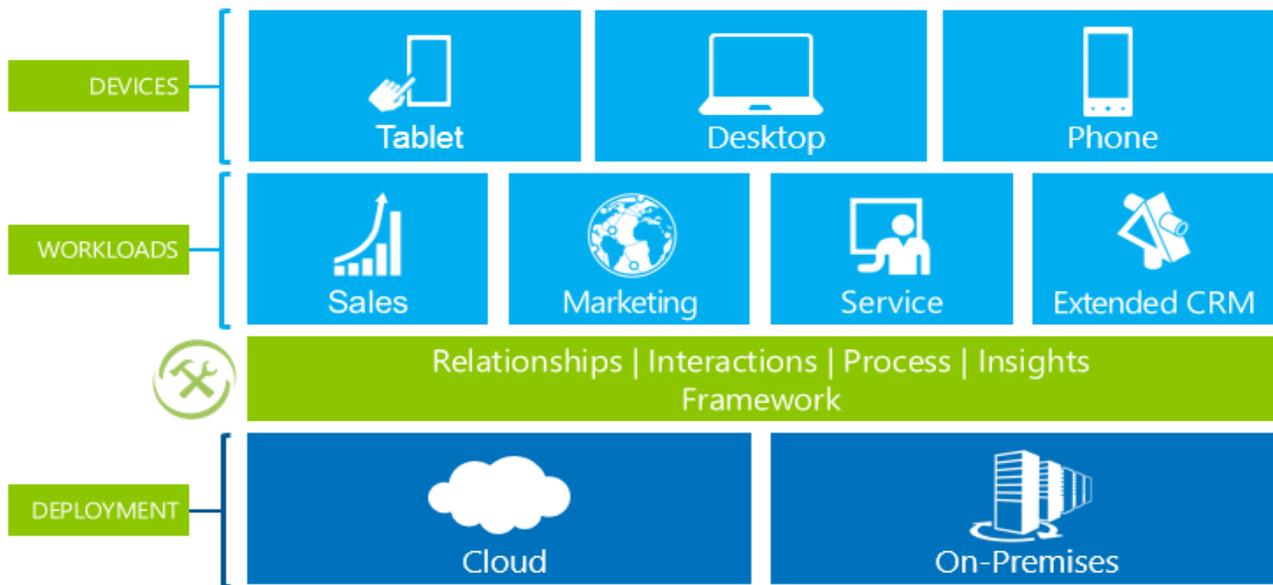

Online

This is a subscription solution whereby your business purchases the required software on a subscription basis, and have it hosted by Microsoft, again in a world class data centre in a high-availability environment, monitored and managed 24/7/365 to give you real peace of mind. You subscribe to your own Project-CRM environment paying a monthly fee per user. This cost is often treated as monthly expenditure and thus great ROI's can be achieved with no capital expenditure. Using the Online model allows you to more accurately predict your IT costs, and allows you to overcome any capital cost barriers often associated with implementing CRM solutions.

On Premise

This has been the traditional method of implementing CRM. The CRM servers being located within your own offices. Your business purchases the required software, and utilizes your own IT infrastructure (servers etc..). You thus own all the software and hardware required.

KMS: Setting the Standard for CRM within the Construction Industry.

KMS have developed **the** CRM solution for companies involved in the Construction Industry. By building on 20 years experience servicing this marketplace, along with the latest Microsoft technologies, KMS have created a solution which is seen as a '**game changer**' in the world of CRM and Construction.
