

Project-CRM 2013: Building Products Solution

KMS: Setting the Industry Standard for CRM within the construction industry

KMS have developed the CRM solution for companies selling into the construction industry. By building on 20 years' experience of serving this marketplace, along with the latest Microsoft technologies, KMS have created a solution which is seen as a 'game changer' in the world of CRM and construction.

KMS Works the way the Construction Industry does.

KMS Works with your existing processes.

KMS Works with your existing technology.

Sales and Marketing

Workflow: Qualify → Specification (Active) → Pricing → Award → Close → Next Stage

- Current Situation: Existing stuff is broken. Specification Issued* *mark complete*
- Customer Need: Need new stuff.
- Site Survey Completed: 12/02/2014

Process driven Opportunity Management helps users capture the right information at the right time to progress each Project Lead through the steps you identify in your own business processes.

Get more leads and close more business with KMS Project-CRM. Access a complete view of customer data online or offline, and leverage tools that enable your sales professionals to get real time access to leads. They are then able to identify, cross-sell and up-sell opportunities and close more deals faster.

Private Commercial	£11,000,000
Private Housing	£11,000,000
Infrastructure	£11,000,000

A Familiar Experience

MS Outlook

A brand new client completely revamped for CRM 2013. With many familiar features but with lots of new additions. You can now take advantage of native outlook grids, reading panes, categories, filters, support for multiple organisations and much, much more.

CRM and Email Appointments

In the Outlook client, you are given contextual CRM information about the particular email that you are tracking! For all of the contacts on the email, right from your Reading Pane, you see the related record links in CRM. These links are organised by record type for easy reading and you can click on these links to open up the CRM forms and if one of the recipients isn't in CRM? They will come up in red fonts showing that they are unresolved. You will be one click away from creating them right from your inbox.

The Smartphone and Tablet Experience

Whether you are in the office or on the go KMS' Project CRM can be accessed where ever you are. With new applications for the iPad and Windows 8 tablets along with phone applications for the iPhone, Android and Windows phone, it has never been easier to input and extract information as if you were sat at your desk in the office.

Project-CRM also offers Cross Browser Compatibility so you don't need to change the way you would usually work, whatever your preferred browser, you will still have access to the same features and capabilities.

Fits your IT Strategy

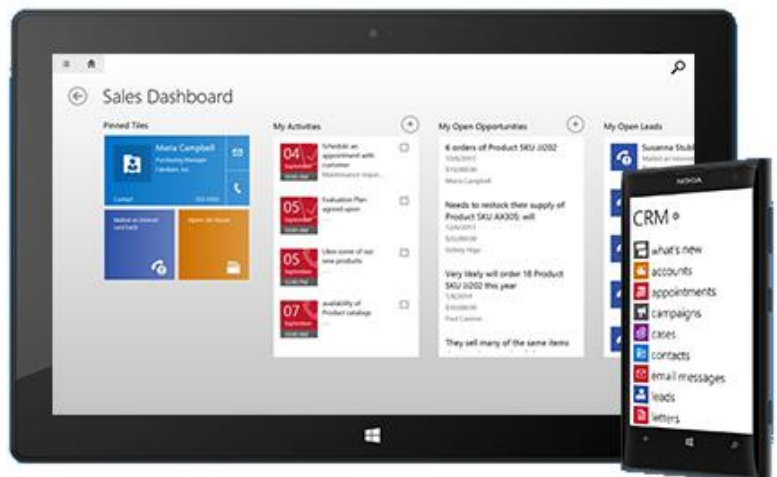

Project-CRM is available Online, Hosted or On Premise.

Access

Information can be accessed where ever you are. Through your Microsoft Outlook, iPhone, iPad, Smart Phone or Tablet.

Cloud Development

Project-CRM, the construction industry solution for Microsoft Dynamics CRM 2013, is the leading edge of Cloud computing which uses groups of servers and scalable resources over the internet.

What is Advanced Find and How Can It Work For You?

KMS Project-CRM includes advanced find functionality that allows users to create complex queries in order to return specific datasets. Once a set of data is isolated, the user can do many different CRM actions. Several common examples are listed below:

- Work with the precise set of data in a variety of ways (e.g. edit, bulk email, etc.)
- Export the data to Excel to do further analysis. If the data is exported in a "dynamic" fashion, users can refresh the data within Excel. Many users also use the export

to Excel feature in order to create a template to use when importing data in the future.

- Create a saved view. A saved view allows you to see your queries criteria in a personal view to use in the future. If others would find it useful, then it's very easy to share with other users.

Highly Customisable To Fit Your Business

Configure your own views, fields and templates to suit your business requirements. Project CRM works the way you work and can be adapted to show your specific needs with easily accessible tabs that will take you straight through into your required area in as few clicks as possible.

Security

Grant specific rights to different groups of users by role and control the actions different users have the power to take within the CRM system. This security can also be applied to an individual field to ensure that sensitive or secure information can be protected. A full Audit Trail also records which users made updates to each individual record and what information was changed.

KMS Data Import Tool

KMS have developed a tool that will allow you to import information from a 3rd Party Data Project Supplier directly into Project CRM with an unprecedented ease of use. This allows you to be able to reach more prospect business in a shorter time span and once the information has been entered into CRM it can be easily tracked and monitored.

Services

At KMS we understand that the software is just part of the process. In order for the implementation to be a long-term success, your organisation's people, technology, and business processes need careful consideration.

KMS Consultancy ensures your system is deployed with your specific business and people in mind, rather than just installing the 'standard' setup and hoping for the best. From initial requirement mapping and system planning, through to achievable timescales, the KMS Consultancy Team works with you to deliver a system that can realistically deliver your aims.
